

Project showcase using Screenshots

Screenshots are in order, following up an admin logs in into the website and visits all the pages. Parallely a user also logs in, the user goes into the house rental section. Admin and User both see different buttons, as admin section is only for admin and user has buying functionality. Checks available houses and puts a booking requests. This requests goes to the respective admin and the admin approves the request and the house gets booked.

Similarly in Car rental service, the user makes a request to rent a car. This request can be seen by all the admins, and in our case the admin sees it and approves it, which is reflected to the user.

At the end we see a weather service, which can be accessed without logging in. It gives you weather reports for upto 5 days. The below horizontal scroller is used to change date and time.
